Website: Coxygen Global University

Tester: Nsungu Mushaba, Kamogelo Moruri, Benedict Monsemvula

Date: 21/08/2026

Module/Subject: WIL/IE

1. Introduction

The purpose of this website testing is to identify problems and areas for improvement on the website. The testing focuses on the website's functionality, navigation, usability, responsiveness, and overall user experience.
The main goal is to identify issues that may make the website difficult or confusing to use and recommend suitable solutions to improve the website for its users. The website was tested from a user's perspective, with particular attention given to navigation, buttons, links, scrolling, loading, mobile usability, and accessibility.

2. Testing Objectives

The objectives of the website testing are to:

- Identify problems that users may experience while using the website.
- Determine whether the website's buttons, links, and navigation features work correctly.
- Identify usability problems that could confuse users.
- Test whether important website features are easily accessible.
- Identify problems with the website on different devices.
- Evaluate the website's overall user experience.
- Recommend improvements that can make the website easier and more convenient to use.

3. Areas Tested

The following areas of the website were tested:

Testing Area	**What Was Tested**
Navigation	Buttons, menus and page navigation
Functionality	Whether website features work correctly
Links	Social media, email and telephone links
Scrolling	Mouse and page scrolling functionality

Homepage	Homepage content and interactive elements
Mobile Responsiveness	How features behave on mobile devices
Usability	Whether features are easy for users to understand
Loading	Loading indicators and page behaviour
Coxy Wallet	Functionality, usability and mobile behaviour

4. Testing Findings

4.1. Basic Information Button

Issue ID: P01

Feature Tested: Basic Information

Problem Found

The Basic Information button does not take the user directly to the section containing the basic information. Instead, it redirects the user back to the homepage. The user then has to scroll down the homepage to find the required information.

A green loading bar also appears before the website redirects the user back to the same homepage.

Expected Result

The Basic Information button should take the user directly to the section or page containing the basic information.

Actual Result

The user is redirected to the homepage and must manually scroll down to locate the information.

Impact on Users

This can be confusing and inconvenient, especially for new or inexperienced users who may expect the button to take them directly to the relevant information.

Severity

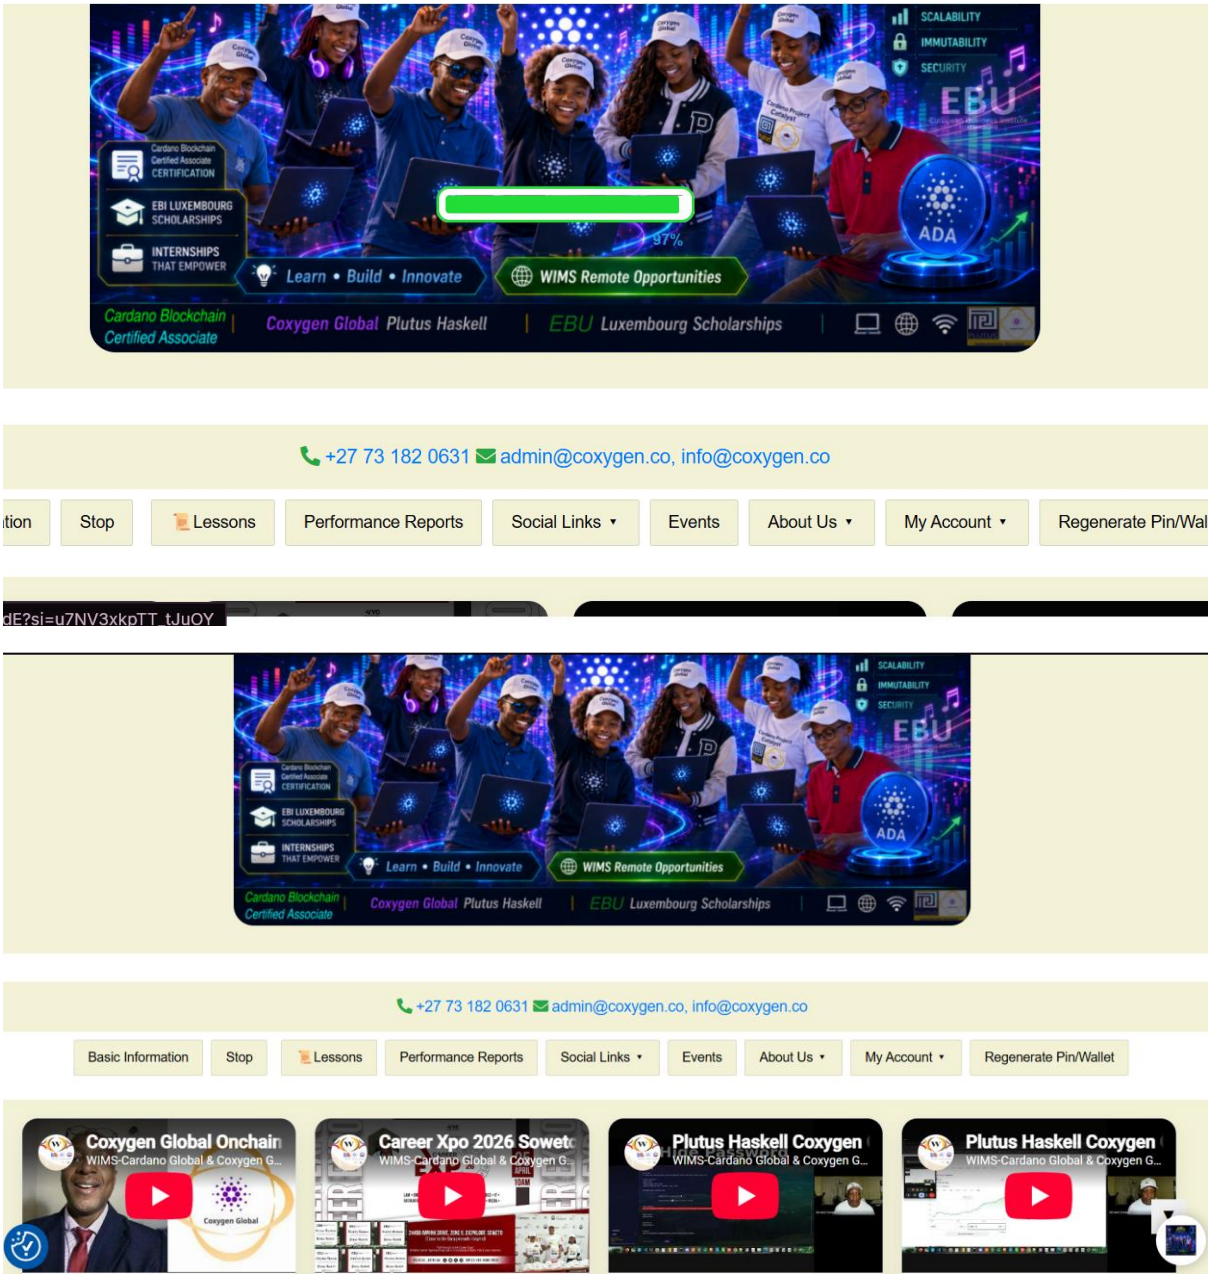

Medium

Recommended Solution

The Basic Information button should be linked directly to the relevant information section or page. This would reduce unnecessary navigation and make the website more beginner friendly.

Evidence

Screenshot P01: Basic Information button and resulting homepage.

4.2. Performance Reports – Back Button

Issue ID: P02

Feature Tested: Performance Reports

Problem Found

The Back button on the Performance Reports page does not work correctly.

Expected Result
The Back button should return the user to the previous page.

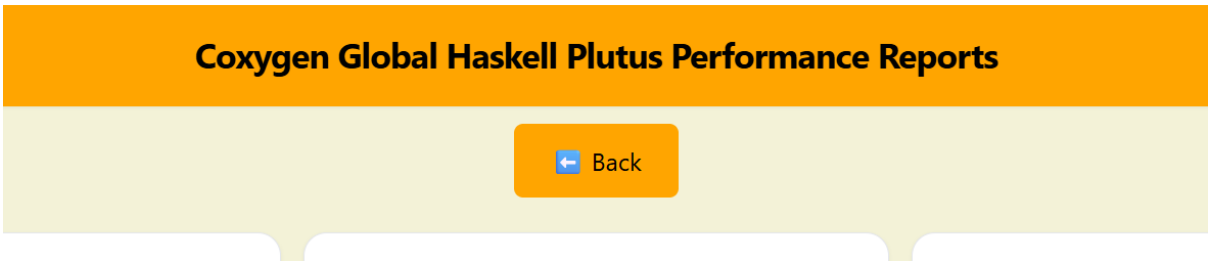

Actual Result
The Back button does not allow the user to return to the previous page. The user has to use the website tabs to navigate back.

Impact on Users
Users may become frustrated because they cannot use an expected navigation feature.

Severity
High

Recommended Solution
The Back button should be fixed so that it correctly returns the user to the previous page.

Evidence
Screenshot P02: Performance Reports page showing the Back button.

4.3. Website Navigation Gets Stuck

Issue ID: P03
Feature Tested: Website Navigation

Problem Found
While using the website, the page sometimes becomes stuck on the section containing the list of Real-World Assets solutions. The user then has to select the **Show Menu** button to access the rest of the website.

Expected Result
Users should be able to navigate through the website normally without the page becoming stuck on a particular section.

Actual Result

The website sometimes remains on a particular section and requires the user to open the menu again.

Impact on Users
This can interrupt the user's browsing experience and make navigation more difficult.

Severity
Medium

Recommended Solution
The website navigation should be reviewed to prevent the page from becoming stuck on a particular section.

4.4. Mouse Scrolling Stops Working

Issue ID: P04
Feature Tested: Scrolling

Problem Found
After spending some time on the website, the mouse scroll wheel sometimes stops working.

Expected Result
The user should be able to scroll up and down throughout the website without interruption.

Actual Result
The mouse scroll wheel stops responding after some time, preventing normal scrolling.

Impact on Users
Users may not be able to access content further up or down the page.

Severity
High

Recommended Solution
The scrolling functionality should be investigated to determine what causes the mouse scroll wheel to stop responding and ensure that users can scroll normally throughout their session.

4.5. Coxy Wallet Blocks Scroll Button

Issue ID: P05

Feature Tested: Coxy Wallet and Page Navigation

Problem Found

The Coxy Wallet overlaps the scroll-down button. The scroll-down button is positioned behind the Coxy Wallet, making it difficult or impossible to use.

Expected Result

Important navigation controls should remain visible and accessible.

Actual Result

The Coxy Wallet covers the scroll-down button.

Impact on Users

Users may be unable to use the scroll button to navigate through the page.

Severity

Medium

Recommended Solution

The position of the Coxy Wallet should be adjusted so that it does not overlap important navigation controls.

4.6. YouTube Videos Disappear

Issue ID: P06

Feature Tested: Homepage YouTube Videos

Problem Found

After exploring the website, the YouTube videos on the homepage sometimes disappear.

Expected Result

The YouTube videos should remain visible and accessible when the user returns to the homepage.

Actual Result

The videos disappear and the user has to reload or refresh the website before they become available again.

Impact on Users

Users may think that the videos are unavailable or that the website is malfunctioning.

Severity
Medium

Recommended Solution
The website should be reviewed to determine why the videos disappear after navigation. The videos should remain available when the user returns to the homepage.

4.7. Previous Page Navigation

Issue ID: P07
Feature Tested: Previous Page Navigation

Problem Found
The website does not allow users to properly use the Previous Page function. Users have to use the website tabs instead to return to a previous section.

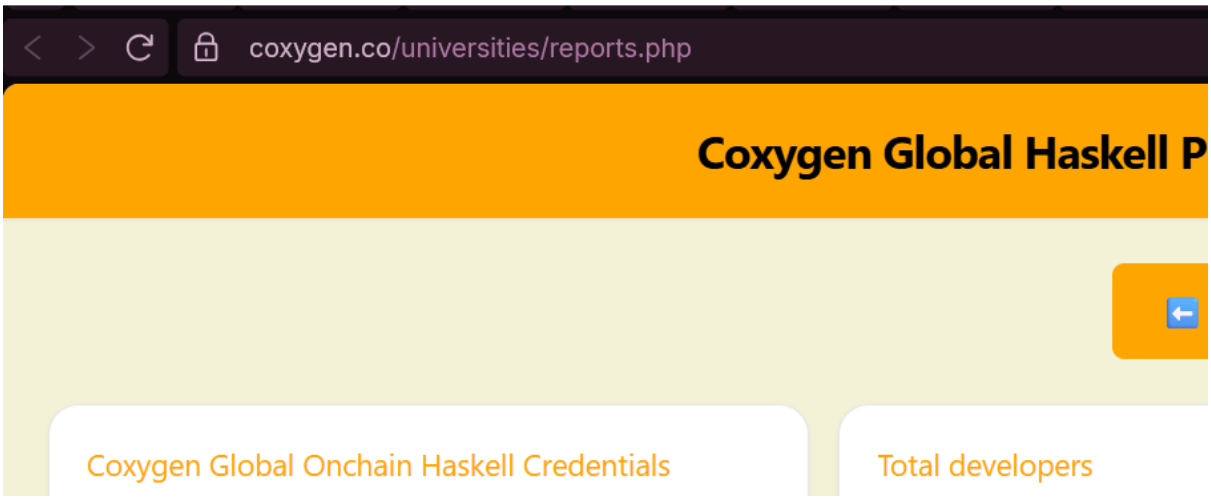

Expected Result
Users should be able to return to the previous page easily.

Actual Result
The Previous Page function does not work correctly.

Impact on Users
This makes navigation less convenient and may cause confusion for users.

Recommended Solution
The website's navigation should be reviewed to ensure that the Previous Page function works correctly.

Evidence
Screenshot P07: The previous button does not function

4.8. Telegram Social Media Link

Issue ID: P08

Feature Tested: Social Media Links

Problem Found

The Telegram social media link does not redirect the user to the website's official Telegram account.

Expected Result

Selecting the Telegram link should take the user to the official Telegram account.

Actual Result

The link remains on the same page instead of redirecting the user.

Impact on Users

Users cannot easily access the organisation's Telegram account.

Severity

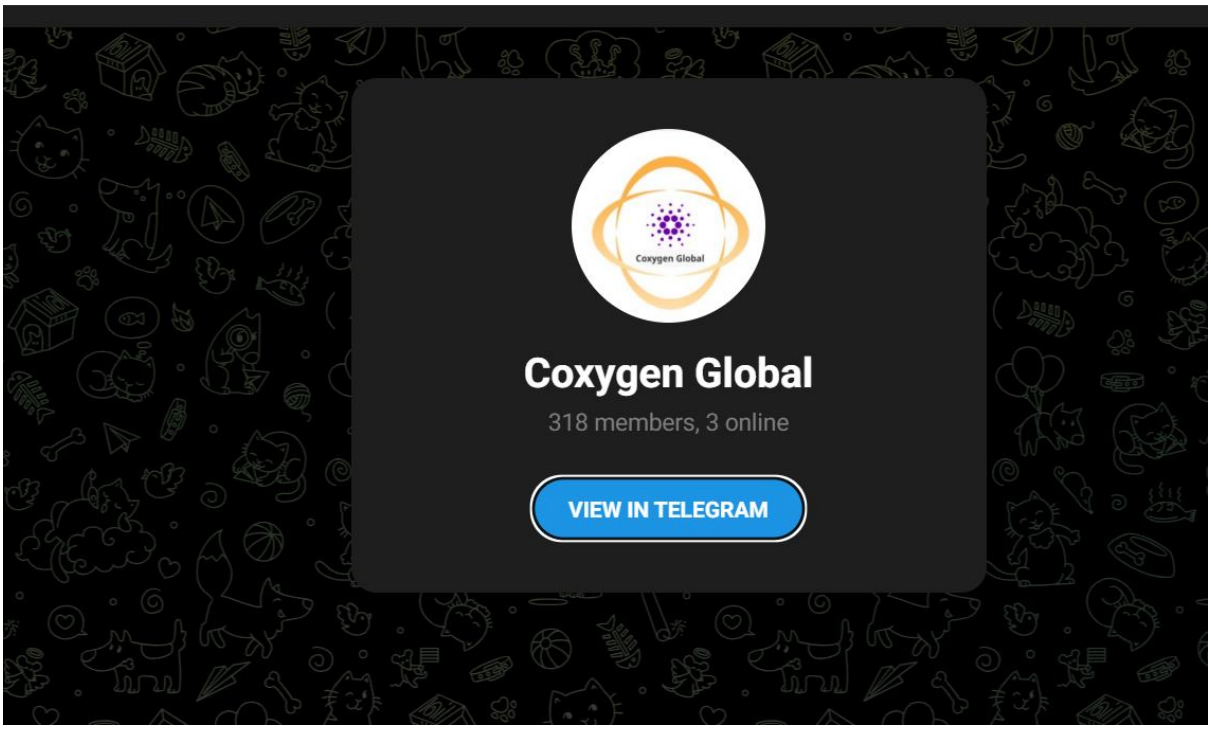

Medium

Recommended Solution

The Telegram link should be checked and updated so that it directs users to the correct official Telegram account.

Evidence

Screenshot P08:

4.9. Email and Phone Number Links

Issue ID: P09

Feature Tested: Homepage Contact Information

Problem Found

The email addresses and phone number displayed on the homepage do not work correctly as links.

Expected Result

Users should be able to select the email address to contact the organisation and select the phone number to make a call on supported devices.

Actual Result

The email and phone number links do not respond correctly when selected.

Impact on Users

Users may have difficulty contacting the organisation through the information provided on the website.

Severity

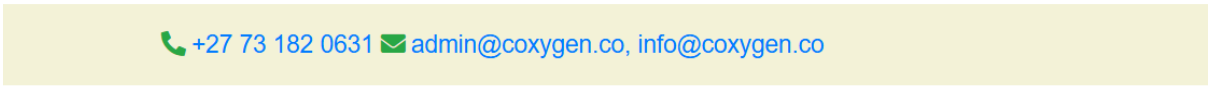

High

Recommended Solution

The email and telephone links should be checked and corrected so that users can easily contact the organisation.

Evidence

Screenshot P09:

4.10. Coxy Wallet – Beginner Usability

Issue ID: P10

Feature Tested: Coxy Wallet

Problem Found

The Coxy Wallet may be confusing for inexperienced users because its purpose and functionality are not immediately clear.

Expected Result

A first-time user should be able to understand what the Coxy Wallet does and how to use it.

Actual Result

The feature may not provide enough guidance for users who are unfamiliar with it.

Impact on Users

New users may become confused or unsure about how to use the feature.

Severity

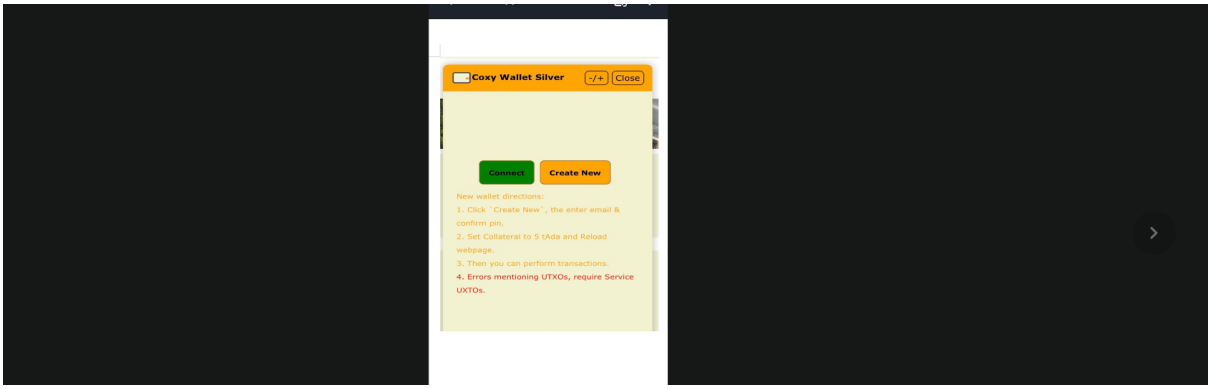

Medium

Recommended Solution

Provide clearer labels, instructions, explanations, or tooltips to help inexperienced users understand how the Coxy Wallet works.

Evidence

Screenshot: P10

4.11. Coxy Wallet – Mobile Usability

Issue ID: P11

Feature Tested: Mobile Responsiveness

Problem Found

The minimise and maximise options of the Coxy Wallet are not user-friendly on mobile devices. The wallet does not respond or change position correctly when the controls are used.

Expected Result

The Coxy Wallet should respond correctly to touch controls and allow users to minimise and maximise it easily.

Actual Result

The wallet remains stagnant when users attempt to minimise or maximise it on a mobile device.

Impact on Users

This can make the feature difficult or frustrating to use on mobile devices.

Severity

High

Recommended Solution

Improve the mobile responsiveness of the Coxy Wallet and ensure that the minimise and maximise controls work correctly on mobile devices.

5. Summary of Findings

Issue ID	Area Tested	Problem	Severity
P01	Basic Information	Button redirects to homepage	Medium

P02	Performance Reports	Back button does not work	High
P03	Navigation	Website gets stuck on a section	Medium
P04	Scrolling	Mouse scrolling stops working	High
P05	Coxy Wallet	Blocks scroll button	Medium
P06	Homepage	YouTube videos disappear	Medium
P07	Navigation	Previous Page function does not work	High
P08	Social Links	Telegram link does not redirect	Medium
P09	Contact Information	Email and phone links do not work	High
P010	Coxy Wallet	Not beginner-friendly	High
P011	Mobile	Coxy Wallet controls do not work correctly	High

6. Overall Recommendations

Based on the testing, the website needs improvements in navigation, functionality, mobile responsiveness, security, and user-friendliness.

The following technologies could be used to improve the website:

- **HTML and CSS** – to improve the website layout, design, and mobile responsiveness.
- **JavaScript** – to fix buttons, links, scrolling, menus, loading features, and other interactive functions.
- **Haskell** – could be used for some backend functions where reliable and well-structured code is needed.
- **Blockchain** – could be used where the website needs secure and trustworthy records, such as transactions or important user information.
- **SQL** – could be used to store and manage website and user information.
- **Python, Java, PHP, or Node.js** – could be used for backend functions and connecting the website to a database.

The website should also be tested again after the improvements are made to ensure that the problems have been fixed. The main goal should be to make the website easy to use, reliable, secure, and accessible to all users.

7. Conclusion

The testing identified several issues that may affect the overall user experience of the website. While the website provides useful features and information, some navigation, functionality, and usability problems can make it difficult for users to access information and use certain features.

Addressing the identified problems would improve the website's usability, accessibility, and overall user experience. Further testing should be conducted after the recommended improvements have been implemented to confirm that the issues have been successfully resolved.
